Dice Reference ..... A

CHAPTER 1

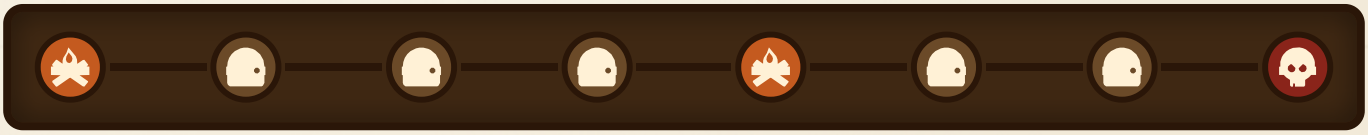

Goal & Run at a Glance

You are one Adventurer. Fight through **three dungeon floors** and defeat the **Big Boss** at the bottom.

Each turn your 16 dice are scrambled into a 4×4 **Tray**. Tap out a **Path** through the faces to attack, defend and heal. Every fight is a small puzzle; every victory is a new die or relic to build with.

The Route

Every floor is the same eight stops, shown on the Route bar at the top of the screen. Long-press any stop to see what it is.

Camp · Room ×3 · Camp · Room ×2 · Boss

A room is an **Enemy**, a **Trap** or a **Shrine**, and you only learn which when you open the door. The first room of a run is always an Enemy. Between two Camps (or a Camp and the Boss) you meet at most one Trap and one Shrine.

Floor	Loot	Enemy Health	Trap Health	Boss
1	Alloy	7 – 15	25	Rogue Golemancer, Heating Elemental or Grosteque Grafter
2	Gilded	14 – 26	30	The Necrorancher, Bellicose Biomancer or Ceramic Golem
3	Magic	14 – 38	40	**Big Boss:** Extruzeon or Myceleus

HOW YOU WIN

Defeat the Big Boss. The run ends in defeat only when your Health hits 0 *and* you have no Back Pocket dice left to roll. See Chapter 10.

CHAPTER 2

Starting a Run

On the character screen pick an **Origin** and a **Class**, optionally name your Adventurer (the name is cosmetic; each run also gives your Adventurer a random skin tone: Original, Green, Blue, Purple or Gray) and press **Enter the Dungeon**. You start with **20 Health**, an empty Back Pocket, and a Tray of 16 dice: **8 Attack Die I**, **7 Maneuver Die I** and your **Origin die**.

Choose your Origin

Your Origin sets your signature die.

Dwarf

Dwarven Doohickie

Shield up, then pop it for a big Hit.

Open from the start

Gnome

Gnomish Mushroom Cap

Damage over time and self-sustain.

Open from the start

Halfling

Bonus Breakfast

Healing and buffs.

Unlocks after you win a full run with any Origin

Pixie

Pixie Powder

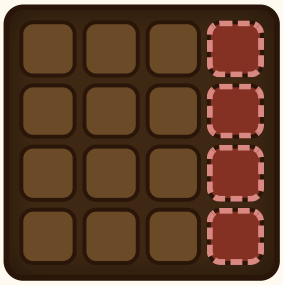

Blink past trouble, leave mischief behind.

Unlocks after you win with two different Origins

Choose your Class

Your Class gives you a **zone** on the Tray, highlighted in the Class color, and one ability that works inside it.

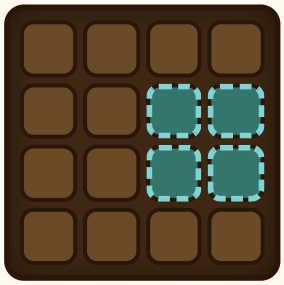

Armsmaster

The right column

Once per turn, turn any Action or Blank in the zone into a **Hit 2**.

Guard

The middle-right 2×2 block

Once per turn, turn any Action or Blank in the zone into a **Block 2**.

Dungeoneer

The two middle squares on the left and right edges

Inside the zone, a Path can **wrap** from the left edge to the right edge on the same row.

Arcanist

The rising diagonal (bottom-left to top-right)

Inside the zone, a Path may move **diagonally** as if using Dodge.

USING A CLASS SKILL

For Armsmaster and Guard, press Skill, then tap a die in your zone. The conversion lasts for that turn only.

Starting Boon

Once unlocked, you can swap one of your Maneuver Die I for a Loot die you have discovered. A die carried over from a defeat replaces your extra Attack Die I. See Chapter 11.

CHAPTER 3

The Dice

Your power lives in your dice. Sixteen sit in the Tray and are scrambled every turn; any others wait in the **Back Pocket**. Each die has six faces, each either blank or an Action with a value. **Long-press any die** to read what its face does.

Die	What it is	Faces
Attack Die I	Basic damage die	
Attack Die II	Basic damage die	
Attack Die III	Basic damage die	
Maneuver Die I	Basic movement die	
Maneuver Die II	Basic movement die (adds a Pivot)	
Maneuver Die III	Basic movement die (two Pivots)	
Origin die	One per Adventurer	See Chapter 2
Alloy Loot dice	Common loot, Floor 1	20 dice
Gilded Loot dice	Rare loot, Floor 2	20 dice
Magic Loot dice	The strongest, Floor 3	12 dice

Basic dice show their level (I, II, III). Loot dice show the name of the item. Every Loot die is in the Dice Reference at the back.

The Back Pocket

The Back Pocket holds every die that is not in your Tray. Dice land there when a new Loot die replaces them, and you can swap them back at Camp. They are also your **safety net**: when your Health hits 0, the game rolls a random Back Pocket die for you. Open it any time with **Pocket**.

CHAPTER 4

Taking a Turn

A fight is a series of **rounds** (the Round counter sits above the Tray, which is a chest of oak and iron). The brass padlock on its front pops open when you press Go and glows when your Path is hitting hard. Combat ends the instant either side reaches 0 Health, even mid-round.

1. **Scramble.** Every die takes a random face. This happens when a room opens and at the end of every round.
2. **Build a Path.** Tap a die to start, then tap neighbors to extend. Tap the last die again to step back one. **Clear** removes the whole Path. A running damage total and any *Lethal* or *Overkill* hint update as you build.
3. **Go.** Your Path resolves one die at a time, in the order you tapped. **Skip** fast-forwards the animation without changing the result.
4. **The reply.** Enemy takes its D.O.T.; enemy heals from its H.O.T., then acts (unless frozen); then you take your own D.O.T. and receive your H.O.T.
5. **New round.** Fresh Scramble. Back to step 2.

Example Path

Fig. 1 A five-die Path. **1** Boost ×2 → **2** Hit 2 (4 damage) → **3** Dodge → **4** Combo 1, reached on a diagonal, with 3 neighbors showing Hit, Block and H.O.T. (1×(1+3) = 4 damage) → **5** Hit 1. **Total: 9 damage.**

Path Rules

- A Path may start on any die showing an **Action**. **Blanks** can never be part of a Path.
- A die can be used only **once** per Path.
- After most dice the next die must be directly **up, down, left or right**. Maneuvers change this:

- **Dodge** → next die is **diagonal**
- **Leap** → exactly **two** **squares** away in a straight line (jumps the square between)
- **Pivot** → any of the **eight** neighbors

- Your Class zone can add moves (Chapter 2).
- You may press **Go** with a Path of just one die. If every die is blank, Go lets you pass the turn.
- Dice covered by a **Minion** count as blanks.

Tokens

Shrines hand out one-use tokens, used from the **Item** button during a fight (not mid-resolution):

Nullify

Clears effects like the Nullify face.

Freeze

The enemy skips its next action.

Boost

Multiplies the first die of your next Path, if it can be boosted.

Action Faces

Hit N
Deal N damage.

Combo N
Deal N × (1 + neighbors) damage. A neighbor is a die directly up, down, left or right of the Combo (in your Path or not) currently showing a Hit, Combo, Block, H.O.T. or D.O.T. In the game a Combo that already has neighbors is outlined in a star-shaped glow: gold for 1, a double ring for 2, and an orange double ring for 3 or more.

D.O.T. N
Add N to the enemy's D.O.T.

Leech N
Add N to the enemy's D.O.T. *and* N to your own H.O.T.

Heal N
Heal N Health right now, up to your maximum.

H.O.T. N
Add N to your H.O.T. Your H.O.T. can never be higher than 6.

Block N
Add N to your Block. The first Block face in a Path adds +1 extra (two Block 2 faces give 5, not 4).

Boost ×N
Multiply the next Hit, Combo, D.O.T., Leech, Heal, H.O.T. or Block in your Path by N. Consecutive Boosts multiply (×2 then ×3 is ×6). Any other face in between wastes it.

Dodge
Path may continue to a diagonal die. No other effect.

Leap
Path may continue exactly two squares away in a straight line. Clears a Minion in the square it jumps over.

Pivot
Path may continue to any of the eight neighbors. No other effect.

Fumble N
Add N to your *own* D.O.T. (never multiplied by Boost). The Path continues normally.

Freeze
The enemy skips its next action. It still takes D.O.T. and heals from H.O.T.

Nullify
Clears everything it can reach at once: all Minions, your D.O.T. and the enemy's H.O.T.

Dodge, Leap and Pivot are **Maneuvers**. They do nothing alone but count toward many quests.

Statuses

Status	How it works
Block	Absorbs incoming damage point for point and is used up as it does. It lasts for the current fight only.
D.O.T.	At round end the holder takes damage equal to its D.O.T., then it drops by 1 (3 deals 3, then 2, then 1). Your own D.O.T. ignores Block.
H.O.T.	At round end the holder heals equal to its H.O.T., then it drops by 1. Never above maximum Health. Your own H.O.T. is capped at 6.
Shield (enemy)	Some enemies gain Shield, which soaks up the damage you deal (Hits, Combos and quest bonuses) before their Health is touched. D.O.T. ignores Shield.
Minion	Covers a random die in your Tray so it counts as a blank. Each Hit that resolves removes one Minion, as does a Leap over it, or Nullify (all of them).

RESETS

Every status resets when a new room opens: your Block, D.O.T. and H.O.T., and all of the enemy's statuses. Only relics that grant Block at the start of a fight (Vanguard Banner, Forgeplate) give you any. An armed Boost shows as a gold chip on your status row; long-press any status chip to read it.

CHAPTER 6

Encounters

Every door opens onto one Encounter. The doorway shows its name, Health bar (Bosses get a curved one) and what it does each turn; quests hang on a paper notice above the VS. Bigger monsters loom larger in the doorway. Your own bar reads "Name, Origin Class".

Enemies & Traps

Enemies are the dungeon's ordinary defenders. **Traps** have more Health (25, 30 and 40 by floor) and are meant to be beaten with quests rather than raw damage. Each turn an Enemy or Trap performs *every* action on its card in one go: it hits you, gains Shield, heals, channels H.O.T., adds to your D.O.T., or summons Minions.

Quests

Most Enemies and every Trap list **quests**. Completing one deals its bonus damage at once (or grants its listed effect). Quests are checked once your Path finishes, so "3 maneuvers" means three Maneuver faces in one Path. Each quest counts once per fight. An Encounter's **Quest Health** caps the total bonus damage its quests can deal.

Quests ask for: a number of Maneuvers, Dodges, Leaps, Pivots, Heals or Blocks in one Path; blank dice left unused; a Path of a certain length (or a short one); a damage total in one turn; or surviving until a certain turn.

Shrines

A Shrine is a room without a fight. Take its boon and walk on.

Floor	Shrine	Boon
1	**Sacred Bellows**	Upgrade Player Maximum Health by 5.
1	**Expediting Spores**	Upgrade a lvl 1 Maneuver Die to a lvl 2 Maneuver Die.
1	**Ecclectrical Outlet**	Trade in loot for one of three Alloy dice options.
1	**Half-Empty Fountain**	Heal 10 OR Upgrade Player Max Health by 5.
1	**Scroll Dispenser: CLEAR**	Gain a one-use Nullify token (x3).
2	**Enchanted Anvil**	Upgrade a lvl 1 Attack Die to a lvl 2 Attack Die.

Floor	Shrine	Boon
2	**Alchemists Stone**	Upgrade Player Maximum Health by 10.
2	**Department Spore**	Choose one of three Relics.
2	**Half-Full Fountain**	Heal 15 OR Upgrade Player Maximum Health by 10.
2	**Scroll Dispenser: BIG**	Gain a one-use x4 Boost token (x2).
3	**Scrying Spheroid**	Replace a loot die with a random Magic die.
3	**Heron's Fountain**	Upgrade Player Maximum Health by 15.
3	**Storied Emporium**	Choose one of three Relics.
3	**Scroll Dispenser: STOP**	Gain a one-use Freeze token.

If you already own every Relic, a Relic Shrine heals 10 instead.

Bosses

Bosses guard the end of each floor. A Boss does **one thing per turn**, cycling in this order through only the actions it has: hit, summon Minions, gain Shield, channel H.O.T., heal, add D.O.T. A Boss fight also offers **three** Loot choices.

FLOOR 1 BOSS

Rogue Golemancer

24 Health

Hit 2 · Minion 1

FLOOR 1 BOSS

Heating Elemental

40 Health

Hit 3 · H.O.T. 1

FLOOR 1 BOSS

Grosteque Grafter

50 Health

Hit 2 · Shield 2

FLOOR 2 BOSS

The Necrorancher

35 Health

Hit 2 · Minion 2

FLOOR 2 BOSS

Bellicose Biomancer

50 Health

Hit 4 · H.O.T. 2

FLOOR 2 BOSS

Ceramic Golem

70 Health

Hit 3 · Shield 3

BIG BOSS · FLOOR 3

Extruzeon, Co-consul of Waste

90 Health

Hit 6 · Shield 2 · H.O.T. 1

BIG BOSS · FLOOR 3

Myceleus, Co-consul of Rot

75 Health

Hit 2 · Minion 2 · H.O.T. 2 · D.O.T. 1

CHAPTER 7

After a Fight

When an Encounter reaches 0 Health it falls and a **loot chest** appears. The chest holds one pip for each die inside; tap it to open, then pick one die.

Source	Dice to choose from
Enemy or Trap	2
Boss or Big Boss	3
Overkill	+1
Lucky Coin relic	+1

Dice come from your floor's tier (Alloy, Gilded, Magic). You will not be offered a die you already own this run until the whole tier has been seen. Dice you've never seen carry a NEW tag.

OVERKILL!

If the killing blow carries **10 or more** damage past what was needed (6 with the Hungry Blade relic), you score an Overkill: a callout banner, a bigger chest, and one extra die to choose from. While building a Path the game warns you in advance with a Lethal or Overkill hint.

Taking the die. After choosing, pick one Tray die to replace. It goes to your Back Pocket, not the bin, so you can swap it back at Camp. Unchosen dice return to the pool.

NO FREE HEALING

After loot, your Health is **not** restored. The route moves on to the next room or Camp.

CHAPTER 8

Camp

Camp is your only chance to reorganize. Every floor has two: one at the start and one after the third room.

1. **Organize.** Swap any Tray die with any Back Pocket die, as often as you like: tap one die in the Tray and one in the Pocket.

2. **Upgrade.** Combine **3 matching Basic dice** (same type and level, Tray or Pocket) into one a level higher, up to III. One Attack and one Maneuver upgrade per Camp. If dice leave the Tray you need enough spare Pocket dice to refill. Loot dice can't be upgrade material.

3. **Stay a While & Rest.** Once per Camp the Tray is scrambled and you heal **half the non-blank faces** it shows, rounded up (Campfire Kettle adds 3). Resting also gives you a fresh scramble for the next room.

Press **Break Camp & Continue** when you are done.

CHAPTER 9

Relics

Relics are **permanent passive perks** for the rest of a run. They take no Tray space and can't be lost or swapped. You can hold any number, never the same one twice. They show as badges above the doorway; tap to read, and watch them pulse when they fire.

Shrine Relics

Found at Relic Shrines (Department Spore and Storied Emporium). You are shown 3 you don't hold and keep 1.

WS Whetstone
Your first Hit each turn deals +2 damage.

IR Iron Rations
Heal 2 after every victory.

PG Padded Gambeson
Every enemy attack deals 1 less damage.

LC Lucky Coin
Loot rewards offer +1 die to choose from.

CK Campfire Kettle
Resting at Camp heals 3 extra.

VB Vanguard Banner
Start every fight with 3 Block.

BF Bottomless Flask
+8 maximum Health, immediately.

EC Echo Chime
A Path of 5 or more dice deals +3 damage.

VV Venom Vial
Every D.O.T. face you play adds +1 D.O.T.

HB Hungry Blade
Overkill triggers at 6 extra damage instead of 10.

TK Tincture Kit
Every Heal face you play heals +1.

Origin Relics

Never offered at Shrines. **Winning a full run with an Origin earns that Origin's relic**, and every later run as that Origin begins with it.

FP Forgeplate
DWARF
Start every fight with 5 Block.

SS Spore Satchel
GNOME
Leech faces also add +2 D.O.T. and heal +1 more.

PB

Picnic Basket

HALFLING

Heal faces heal +2 and H.O.T. faces add +1 H.O.T.

GD

Glimmer Dust

PIXIE

Each Dodge, Leap or Pivot in your Path adds +1 damage to its last damaging die.

The Relic Codex (gear menu) lists every relic; ones you haven't found appear as locked mystery slots.

CHAPTER 10

Defeat

When your Health reaches 0 the game checks your Back Pocket before ending the run.

1. If the Pocket has dice, one is chosen at random and **rolled**.
2. If it lands on any **Action**, you are restored to **5 Health** and the fight goes on. The die is spent either way.
3. If it lands on a **blank**, that die is lost and the game rolls another.
4. When the Pocket is empty, the run ends.

CARRY A DIE FORWARD

On the Defeated screen you choose one die from the highest tier of Loot dice in your Tray to carry into your next run, where it takes the place of your extra Attack Die I.

CHAPTER 11

Progression & Records

The game remembers every run on your device. None of this changes how a turn is played; it decides what a new Adventurer can start with, and celebrates what happened on the way.

Unlocks

- **Origins.** Dwarf and Gnome from the start. **Halfling** unlocks after you win with any Origin. **Pixie** unlocks once you've won with two different Origins.
- **Origin Relics.** Your first win with an Origin earns its relic. The victory screen announces it; the character screen shows it as a locked slot until then.
- **Starting Boons.** Swap your first Maneuver Die I for a Loot die you've discovered. Alloy after your first win, Gilded after reaching Floor 3, Magic after winning with every Origin. Tap the star on a die to favorite it.
- **Carried die.** The die you carry after a defeat is used in your next run only.

Records

- **Achievements** are lifetime milestones (win a run, win with every Origin or Class, land 10 Overkills, defeat 100 Encounters). They never change gameplay.
- **Run Highlights.** The end-of-run screen shows your biggest single turn, biggest Overkill, longest Path and Close Calls. A gold NEW BEST appears when one of the first three beats an earlier run.
- **Close Calls.** A turn that leaves a foe with 3 Health or less, or a kill 1 to 3 damage short of an Overkill, is called out on screen ("Just 2 HP left!"). Information only.
- **Run History** keeps your last 20 runs. The **Dice Compendium** lists every die you've discovered; the **Relic Codex** every relic.

Settings & Play Data

The gear menu holds sound, motion and vibration options, the **Key** (a glossary of icons), and **Reset Progress**, which erases all unlocks and records. **Export Play Data** packages your recent runs as a file for playtest feedback; nothing is uploaded automatically.

CHAPTER 12

Quick Reference

START
20 Health · 16 dice · empty Pocket

FLOOR
Camp · 3 rooms · Camp · 2 rooms · Boss

LOOT
2 dice (3 for Bosses) · +1 Overkill · +1 Lucky Coin

OVERKILL
10+ past lethal (6 with Hungry Blade)

REST
½ of non-blank faces, rounded up

UPGRADE
3 matching Basics → 1 a level higher

REVIVE
Pocket die rolls Action → 5 Health

STATUSES
All reset when a new room opens

D.O.T. / H.O.T.
Trigger at round end, then drop by 1

BOOST
Multiplies the *next* value face only

From the Tabletop

Dungeon Scramble began as a physical dice game. The video game keeps the rules but takes over the chores: it scrambles the dice, tracks every counter and cube, and shuffles the encounters. The tabletop's multi-Adventurer co-op (extra Health and summed Encounter Health per player) is not part of the video game; this is a **solo** experience.

APPENDIX

Dice Reference

Every Loot die in the game, with all six faces. Faces are tinted by tier.

Alloy Floor 1 Loot Dice (20)

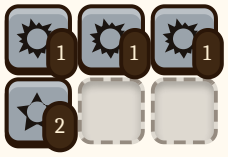

Rapier

Longsword

Crossbow

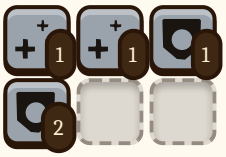

Blunderbuss

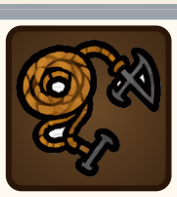

Ironskin Draught

Acid Potion

Grappling Set

Medsack

Gilded Floor 2 Loot Dice (20)

Hidden Estoc

Greaterhammer

Hataxe

Triage Turret

Eye-Frame

Drafter's Draught

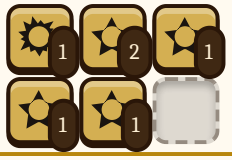

Thorned Bulwark

Cool Whip

Humor-inverter

Winged Boots

Drill Shield

Maximum Capacitor

Mining Mines

Charge-Atlatl

Portable RNGenerator

Poison Sword

Sporific Staff

Genetic Drifter

Leeching Lance

Pleasant Parasite?

Magic Floor 3 Loot Dice (12)

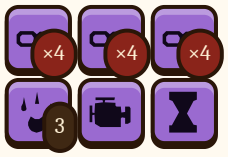

Greatesthammer

Dodecahedron of Future Pasts

Legendary Sheath

Warp Crossbow

N-th Dimensional Printer

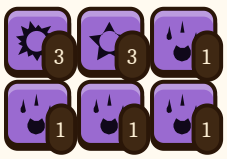

Aloo'Minium Armor

Phlebotomizer

Straw of the Last Lamia

Hospitaler's Merciful Guillotine

Glacial Gorget

Pre-handy-sile Tail
